

# vue实例中的事件数据和方法

```
{{number}}
```

插值表达式

v-text会转义

v-html不会转义

```
<body>
  <div id="root">
    <div v-html="content"></div>
    <div v-text="content"></div>
  </div>
  <script>
    new Vue({
      el: "#root",
      data: {
        msg: "world",
        number: 123,
        content: "<h1>hello</h1>"
      }
    })
  </script>
</body>
```

## hello

```
<h1>hello</h1>
```

```
<body>
  <div id="root">
    <div v-on:click="handleClick">{{content}}</div>
    <div @click="handleClick">{{content}}</div>
    <div v-text="content"></div>
  </div>
  <script>
    new Vue({
      el: "#root",
      data: {
        msg: "world",
        number: 123,
        content: "hello"
      },
      methods: {
```

```
        handleClick: function(){
            this.content = "world"
        }
    }
})
</script>
</body>
```

**v-on:** = @
