作用域链

```
var name = "xm"
function fn(){
    var name = "xh";
    var sex = "male";
    function fn2(){
        var name = "xhei";
        var age = 18;
    }
}
```

Window

在fn2里面访问name的值时可以沿着作用域链查找

可以通过with来延长作用域链,但是不推荐
